Education

2018 – 2023	BEI - Electronics, Communication and Information Technology <i>Pulchowk Campus, IOE</i> Average Percentage: 78.9%
2016 – 2018	+2 Science <i>Kathmandu Model College</i> GPA: 3.78

Publications

2025 Aug	A Weighted Ensemble Approach to Sentiment Classification Using SVM and Naïve Bayes 🔗 <i>MAT Journals</i>
----------	--

Work Experience

2026 Jan – Present	Data Engineer (AI / Data) <i>Maitri Services</i> • Worked on an NLP/LLM-based healthcare coding pipeline that maps clinical text entities to ICD-10 codes and Hierarchical Condition Category (HCC). • Implemented a multi-stage inference architecture consisting of Named Entity Recognition → Context Modeling → Embedding Generation → Re-ranking → Date of Service (DOS) detection to improve clinical coding accuracy. • Used fine-tuned large language models for clinical entity recognition and automated medical code prediction from unstructured healthcare records. • Implemented asynchronous task orchestration using AWS SQS and Celery, enabling distributed, reliable, and fault-tolerant processing workflows. • Ensured secure handling of sensitive healthcare data by following HIPAA compliance practices, with training and practical experience in US healthcare data privacy, PHI handling, and secure data processing standards.
2022 – Present	AI / ML Experience Media Mix Modeling (GrowBy Data) • Statistical Regression Based Model for Business Decision Making. • Helps specialists to make appropriate plan on spending. • Used SLSQP Optimization for providing the optimized revenue for a business. • Time Series Data Analysis. • Forecast revenue predictions. LLM-Based Insights (GrowBy Data) • OpenAI Integration to reporting.

Co-Occurance Of Procedures (Personal Project)

- *Health Domain Project.*
- Used Apriori Association Algorithm.
- Predicts the before and after tests taken by a patient.

A Weighted Ensemble Approach to Sentiment Classification (Undergraduate Project)

- Research Based Project
- Weighted and Hybrid Algorithm Approach to gain maximum final accuracy.
- Implemented Support Vector Machine and Naive Bayes Algorithm.

Text Summarization using LSA and Transformers (Undergraduate Project)

- Developed a **Custom LLM Model using Transformer.**
- Extractive Summary using LSA.
- Abstractive Summary with Transformers.
- Heading Generation with Frequency Normalization.
- Significant word Extraction.
- Research Based Project

2024 Aug – 2025 Dec

Data Engineer

GrowByData

- Developed a Batch Data Processing Framework for Google Feeds.
- Implemented Optimization changes into existing Data Acquisition framework.
- Integration of new agencies in our existing system.
- Worked on optimization of BI reporting.
- Worked on Python and Ubuntu upgrades across servers.
- Wrote shell scripts for scheduling.
- Developed Data Quality Reports for daily monitoring.
- Implemented GraphQL.
- Developed a Framework to overall increase the quality of data delivery.
- Worked on Dremio(data query engine) Migration from AWS to Kubernetes. (majorly only the data part)
- Co-managed and lead the data team.
- Regularly provided feedback and helped in decision making.
- Mentored Interns regularly.

2023 Aug – 2024 Aug

Associate Data Engineer

GrowByData

- **Data Acquisition :**
 - New Data Source Integration for data pull.
 - Implemented in python with OOP Framework.
 - Used Concept of authorization with OAuth2.0 and MCC.
 - Implemented concept of Multi Threading with Producer Consumer Architecture.
 - Worked for Exception handling for various data sources.
- **ETL :**
 - Designed ETL pipelines with Apache Spark in Scala.
 - Data Lakehouse implementation.
 - Migrated Spark based ETL jobs to Lake house based ETL using S3 as data lake to hold parquet format data.
 - Meta Data retrieval using AWS Crawler and storage in AWS Glue Catalog
 - Cloud Implementation with AWS.(S3,EMR,EC2 & Glue Data Catalog)
- **BI Reporting Backend :**

- Worked on Query Optimization for reports in Dremio Engine.
- Used Python Flask with RESTful APIs for backend implementation.
- Implemented data anonymization for Demo Clients with the help of Python Decorator.
- Implemented caching with redis for frequently accessed data.
- Insights Framework for monthly email alerts.
- Experience with Linux system.
- Data Modeling to Star and Snowflake Schema.
- Used Bitbucket as version control and Jira for Project Management Tool.

2023 May – 2023 Jul

Data Engineering Fellow

GritFeat Solutions

- Weather Data Pipeline with forecasting with PySpark in databricks.
- Data Build Tools (DBT) project implementation on hotel data.
- ETL with Pentaho.
- Dashboard creation with Tableau and Power BI.
- Snowflake and SnowSQL.
- Data modeling of Uber data and Hospital Management system.
- Data Migration from MySQL to MsSQL.
- End-to-End data cleaning to visualization with Pandas.

2022 Jul – 2022 Aug

Data Visualization Intern

GlobalShala

- Implemented data visualization with pandas.
- Worked on Advertisement data to remove the campaign with less ROAS values.

Certificates

- AWS Academy Graduate - AWS Academy Cloud Foundations ☑
- Deep Learning Specialization ☑
- IBM Data Science Specialization ☑

Skills

Technical :

Prompt Engineering
Database
SQL
Python
Data Modeling
OOP
ETL/ELT

Soft Skills:

Good Communication
Quick Learner
Problem-Solving
Research Skills
Time Management
Team Player

Tools:

Claude
AWS(EMR/S3/GLUE/EC2/SQS)
Pentaho / Talend
SnowFlake and DBT
Data Bricks/Spark
Tableau/PowerBI
Git/Github/Bitbucket
Latex

Awards

2024 Jul

Employee of the Quarter

GrowByData

2018	E = mc² science olympiad <i>Nepal Physics Olympiad</i>
2018	NESO Science Olympiad <i>Nepal Science Olympiad</i>

Recommendations

Kyle Tremblay  , *Director of Product Development*, Agital USA
